

## TEMPLE AND ITS BUILD PRINCIPLES

# TEMPLE OF LEAN

**Lean thinking** helps to reflect on the work, product, and possible improvements. The goal is to **deliver** a product by employing the build principles.

The cornerstone of any lean ecosystem are **people** who contribute to product creation. Collaboration of different skills eliminates waiting in case people are able to make decisions. Learning opportunities should be provided. Managers should act as teachers.

**Kaizen** is the attitude of minding the process, the product, and possible improvements. In order to assure the quality, the process can be stopped by anyone involved in it in case of a problem so the root cause can be identified and countermeasures are implemented.
